Dear Sir/Madame:

Re: 3753Q - Supply and Delivery of one (1) Emergency Water Mobile Response Unit

These questions and answers includes items of clarification, forms part of the Contract Documents and shall be read, interpreted and coordinated with all other parts. Please review and consider the following information in preparation of your proposals:

Question and Answer

Q.1 Are there any raw water characteristics we can base our design on? For example, groundwater and surface water can have very different water treatment processes. Even surface water from a lake or from the sea will have very different characteristics. What will be the primary source of the system?

A.1 The primary source will be the ocean (sea water), river (brackish/surface water), swimming pool (chlorinated water), and lake water.

Q.2. Is there a difference between what is called the "Mobile Water Treatment Plant" and the "Mobile Water Treatment Unit"?

A.2. Mobile Water Treatment Plant is part of the trailer. Portable Water Treatment unit is an unit that is hand-held or on wheels. This unit is not part of the trailer.

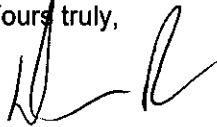

Q. 3. On page 7, it states to produce a minimum flow rate of 5 gpm and 15,000 gpd. Can I assume the design flow will be the maximum of those two values (15,000 gpd or 10 gpm)?

A.3. 5 GPM is for the Portable water treatment unit. 15,000 GPD is for the Mobile Water Treatment Plant which is part of the trailer.

Q.4. In regards to the Mobile Water Treatment Plant, for which technical reason is an ozone oxidation system mandatory ?

A.4 The Ozone oxidation and disinfection system is used as a cautionary measure in case one of the other filtration systems fail.

Yours truly,
